

AROUND THE GREENS

A Newsletter from

Welcome

Lawford Engineering is pleased to provide you with the first of our regular Newsletters to keep clubs and greenkeepers up to date with the latest information on our ever growing range of innovative products and services.

Ditch Walls

Ditch Walls continue to be the mainstay of our business and we pride ourselves in the quality product that is produced. We offer a full advisory service to ensure clubs get the best result for the refurbishments or new installations.

The Ditch Walls can be fitted with rubber or the highest quality synthetic carpet to protect the bowls, or for the ultimate protection we recommend using both.

When coupled with our metal plinth and unique rounded plinth corners an excellent overall finish is achieved. Ditches are made from 40mpa concrete, meet World Bowls Standards and angled to all but eliminate rebound.

We have supplied and installed the ditches in every state in Australia and have even shipped to New Zealand.

Ditch Scraper

Our new ditch scraper will provide you with a perfect finish to your sand filled ditches.

The innovative design is adjustable to suit all regulation ditches in both height and width.

The scraper both rakes and levels and will achieve the desired result with minimal effort and time.

The scraper weighs only 7kgs and can be easily freighted direct to your club.

Rink Numbers & Markers

Our Rink Markers and Numbers are produced to last and are manufactured using high grade stainless steel, aluminium and specially manufactured UV stabilised PVC.

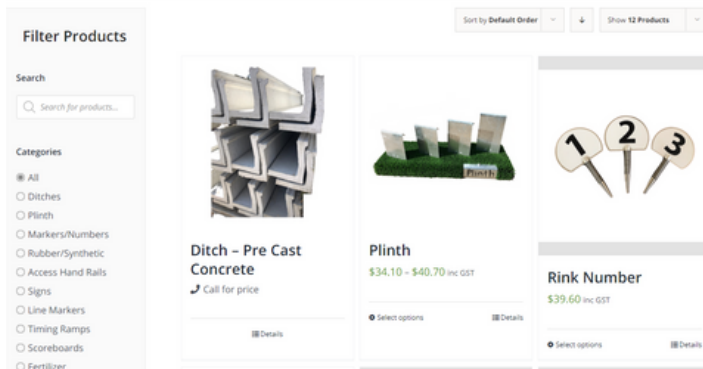

The stainless steel spring and tapered pin ensure that the numbers and markers stay straight and eliminate any issues with varied hole sizes.

Visit our online shop for further details and pricing.
